

Next-Gen Modernization Leveraging low code solutions to accelerate business outcomes

Companies seeking to accelerate business transformation and application modernization will need to look to solutions that expand what's possible. Whether it's enabling higher-level job function or reimagining legacy systems, low code platforms present a new opportunity to do more with less.

Microsoft low code solutions via the Power Platform are accelerating modernization by bringing the power of technology to users across the enterprise. Concentrix Catalyst works with clients to make the most of their Power Platform investment, enabling rapid development/redevelopment of applications and automating business processes. Our workshops leverage the Power Platform and arm you with the ability to solve business problems on the fly.

“With Concentrix Catalyst’s support and our improved versatility with Microsoft Power Platform, we were able to empower our HR team to execute testing, continuing our mission to develop forward-thinking solutions to the issues we face.”
