Introduction

At Concentrix, we are passionate about caring for our planet so that we can leave it better than we found it for future generations. We are committed to innovate and actively work to preserve our planet and to foster an environmentally responsible culture within Concentrix.

Scope

All Concentrix facilities and operations are covered under this policy.

Policy Statement

Concentrix recognizes the importance of environmental protection and is committed to operating its business responsibly and in line with our company values.

We comply with applicable laws and co-operate with regulatory bodies in connection with the technology enabled business services that we provide across our global operations.

We promote responsibility toward the environment among our employees, suppliers, clients and the communities that we operate in, to help prevent detrimental impact on the environment.

Management

Concentrix senior leadership is committed to achieving high environmental standards. The EVP, Strategic Projects & Corporate Strategy, is charged with leading strategic environmental initiatives across three areas as follows:

Climate

Collaborate with partners and innovate our practices to help reduce our carbon footprint through environmentally sustainable solutions and practices.

Waste

Close the loop on our waste by applying a rethink, reduce, reuse, repair, recycle methodology to our sourcing and waste streams worldwide.

Ecosystems

Support programs and partnerships that preserve and restore habitats and biodiversity across the globe, starting with the communities and ecosystems where our employees live and work.

To support achieving our global goals, we have established specific objectives and actions designed to continually improve our environmental performance. Examples include:

- Assess and re-assess our environmental impact and performance against our goals
- Train and promote employee awareness on environmental best practice
- Ensure efficient waste management practices that include proper waste segregation and waste recycling for paper, plastic and e-waste
- Drive energy efficiency and reduce carbon footprint
- Promote the use of recycled and sustainable materials throughout our operations
- Work to help replenish our ecosystems; and
- Meet all applicable regulatory & statutory requirements and enhance the prescribed standards in all the geographies that we operate in

Application of the above management principles has helped several Concentrix sites and client programs receive ISO 14001 Environmental Management Standard Certification.

Reporting

To assess progress against our commitments, we have set goals to be attained by 2025 -- further information on our performance is set out in the latest [Concentrix Sustainability Report](#), which is part of our Environmental, Social and Governance (ESG) initiative. The Real Estate and

Facilities Teams, with support from Procurement, track progress against the goals, including maintenance of associated records. Achievement against the goals is reported monthly on the ESG Dashboard and is reviewed by senior leadership.

Suppliers

Our Supplier Code of Conduct, which applies to Concentrix vendors and subcontractors, includes a commitment to comply with all applicable environmental laws and regulations throughout the world.

Concentrix expects its suppliers to commit to environmental sustainability, with a particular focus on climate, waste and ecosystems, to reduce negative impact on the environment. Examples include implementing best practices to minimize air, water, noise pollution, conserving natural resources, and taking affirmative steps to protect the environment. Concentrix also expects its suppliers to create similar expectations in their own supply chains.

Concentrix is developing a process that formally includes environmental sustainability as a factor in our supplier selection decisions. The process will, among other things, assess how the following factors promote environmental sustainability:

- Supplier business strategy and policy
- Targets and Incentives for supplier leaders and staff
- Supplier's and its supply chain's performance in driving positive environmental outcomes

In addition, suppliers with whom Concentrix has significant spend will be required to obtain a Business Sustainability rating from Ecovadis or an equivalent body (equivalent body will be subject to Concentrix approval). Any supplier who fails to meet the minimum requirements will be required to provide an action plan to improve their rating.
